Subject index

Apparatus
- for bulk growth using ceramic springs 421
- for gallium arsenide growth 157
- for growth without crucible contact 434
- for large scale liquid phase epitaxy of aluminum gallium arsenide 411
- for material feeding to Czochralski growth of silicon 372

Computer simulation; Monte Carlo method
- of convection flows in melts 34
- of gallium arsenide growth 202
- of heat and mass transfer 333
- of heat transfer and thermoelastic stress 325, 352, 365
- of influence of thermal gradients on convection patterns 446
- of pulsed laser deposition 98
- of silicon growth 13

Constitutional supercooling, of
- para tellurite 276

Convection 1, 34, 149, 169, 276, 318, 352, 446

Dendritic growth 43
Device characterization
- electronic materials 82
- lasers 400

Diffusional control
- of crystal growth 49
- of growth of striation-free crystals 1
- of indium-doped gallium arsenide 163
- of patterned nucleation 143

Dissolution, of
- clinopyroxene 49
- gallium orhtophosphate 506

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
- chemical 271

Hydrodynamics, see Convection

Kinetics
- of growth 49, 68, 122, 137, 333, 347, 395, 405
- of interface control 122, 265
- of nucleation 122, 137, 286

Lasers, see Device characerization
Lasers, crystals for
- acousto optics 276
- blue second harmonic generation of potassium lithium niobate 265, 281
- scintillators 252
- silver gallium indium selenide 257
- silver gallium selenide 257
- silver gallium telluride 242
- ultraviolet all-solid-state 302

Lysozyme 149

Melt growth technique
- by Bridgman–Stockbarger method
  - of aluminum–niobium–X eutectic alloys 466
  - of gallium antimonide 434, 441
  - of gallium arsenide 157, 421
  - of germanium silicon 360, 378
  - of indium antimonide 201, 434
  - of indium antimonide cadmium telluride 194
  - of indium gallium arsenide 194
  - of lithium tetraborate 271
  - of lutetium yttrium ortho aluminate 252
- by Czochralski method
  - of cerium-doped lithium calcium aluminum fluoride 302
  - of cerium-doped lithium strontium aluminum fluoride 302
  - of indium-doped gallium arsenide163
  - of indium phosphide 174, 179
  - of langasite 318
  - of lithium niobate 230
  - of para tellurite 276
  - of strontium barium niobate 225
- by edge-defined film-fed growth
  - of silicon 365
- by floating zone method
  - of iron silicon alloy 461
- by laser-heated pedestal growth
  - of strontium vanadate 313
  - of yttrium ortho vanadate 237
- by normal freezing
  - of copper indium gallium selenide 476
- by uniaxial solidification
  - of silver gallium indium selenide 257

– by off-axis sputtering
– – of zinc oxide 106
– by pulsed laser deposition
– – of lanthanum strontium manganate 86
– – of oxides 98
– theory of nucleation of defects 27

Vapor growth techniques
– by chemical transport
– – of zinc selenide 73
– by evaporation and condensation
– – of aluminum nitride 68
– – of gallium nitride 184
– – of *N*,*N*-dimethyl-p-(2,2-dicyanovinyl) alanine films 428
– – of phthalocyanine 308
– – of silicon carbide 325, 333, 347, 352
– by physical vapor deposition
– – of aluminum-doped zinc oxide 93
- by sublimation
– – of silicon carbide 339
